Dr David Ham  
Department of Earth Science and Engineering  
South Kensington Campus  
Imperial College London  
SW7 2AZ

Dear Dr Ham,

As part of NAG's contract with EPSRC to carry out HECToR CSE Services, NAG is required to retain all rights to the work carried out under a dCSE contract on behalf of the Research Councils. This position has been taken to ensure that any intellectual property generated from an award can be licensed to other HECToR users and more broadly if required by the UK Research Councils and thus ensure any advances are kept within the public realm. However, NAG will automatically grant the Contractor and the PI a non-exclusive license to re-use all such rights. For the avoidance of doubt, where the programme of work involves changes to existing software, NAG only requires rights to the modifications themselves (i.e. the dCSE contribution), not to the modified software in its entirety. NAG's grant of rights back to the Contractor/PI therefore allows the modifications to be included into existing software without restriction, including releasing the modified software under a suitable software licence.

Yours sincerely,

Dr Ian Reid
